

SIP-adus Workshop 2021 Session Report

[Safety Assurance]

Breakout Workshop : Test Scenario

Session Outline

- Since 2018, numerous communications and meetings have occurred across different participants from EU HEADSTART, and Japan SAKURA/SIP-adus projects, with a focus on harmonizing AD safety assurance methodologies. These communications evolved in the last few months into a specific action to jointly develop a White Paper that reviews and analyzes the methodologies developed by the corresponding projects in EU and Japan
- The aim of this Workshop was to discuss, consolidate and agree on the final contents of the White Paper on AD safety assurance jointly developed by HEADSTART, SAKURA and SIP-adus projects members.

Breakout Workshop Outcome

- About 30 experts from EU HEADSTART and Japan SAKURA/SIP-adus projects joined the workshop
- We reviewed together the results of HEADSTART, SAKURA and DIVP projects and discussed section-by-section the contents of the White Paper
- We consolidated the contents of the document and agreed on making it public by the end of December 2021. The agreed contents include items for potential harmonization, recommendations and next steps that will guide our future cooperative actions.
