

2020.07.28 AVS symposium. Safety Assurance Session.

Automated Driving Safety Assurance in Japan

Satoshi Taniguchi

Toyota Motor Corporation
JAMA/SIP AD Safety Assurance Lead

AD safety requirements

Safety requirements

Guidelines on the exemption procedure for the EU approval of Automated Vehicles

Safety requirements: When in the AD mode, the vehicle **shall not cause any traffic accidents that are rationally foreseeable and preventable**

WP29: Framework document on automated vehicles

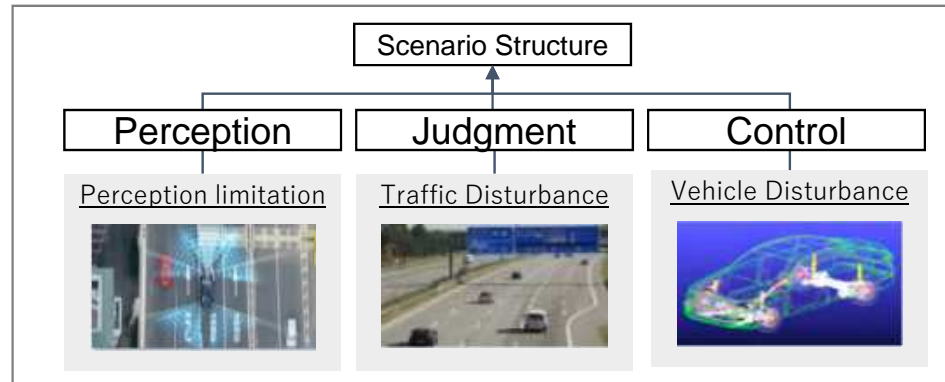

Safety vision: AV shall not cause any non-tolerable risk, meaning that, under their operational domain, **shall not cause any traffic accidents resulting in injury or death that are reasonably foreseeable and preventable**

Key safety elements

NHTSA AUTOMATED DRIVING SYSTEMS 2.0 	MLIT Automated Driving Guideline 	VMAD(Validation Method for Automated Driving) 
1. System Safety	(2) Safety of Automated Driving Systems	a. System Safety
2. Operational Design Domain	(1) Setting of Operational Design Domain (ODD)	e. Operational Domain (OD) (Automated mode)
3. Object and Event Detection and Response	—	d. Object Event Detection and Response (OEDR)
4. Fallback (Minimal Risk Condition)	(7) Safety of vehicles Used for Unmanned Driving Services (Additional requirements)	g. Failsafe Response
5. Validation Methods	(8) Safety Evaluation	f. Validation for System Safety (Refreshed)
6. Human Machine Interface	(4) Human Machine Interface (HMI)	c. Human Machine Interface (HMI) / Operator Information
7. Vehicle Cybersecurity	(6) Cybersecurity (9) Safety of In-Use Vehicles	g. Cybersecurity h. Software Updates
8. Crashworthiness	—	—
9. Post-Crash ADS Behavior	—	—
10. Data Recording	(5) Installation of Data Recording Devices	j. Data Storage System for Automated Driving vehicles (DSAD)
11. Consumer Education and Training	(10) Information Provision to Automated Vehicle Users	m. Consumer Education and Training
12. Federal, State, and Local Laws	(3) Compliance with Safety Regulations, etc.	i. Safety of In-Use Vehicles

Industry challenge: To develop state-of-the-art engineering products that are fully compatible with these safety requirements and elements.

Standardization and Regulatory context

Regulations for level 3 systems on highways

ISO34502 Engineering framework and scenario based approach

OpenDRIVE, OpenSCENARIO, ...

Regulation
Safety criteria & Test requirements

Standard
Test Scenario Derivation Process

Technical Standard
Specification of driving maneuvers and test scenarios.

Japan White Paper on AD safety assurance

STRATEGY JAMA

RESEARCH

STANDARDIZATION

Supporting government research projects

SAKURA Objectives

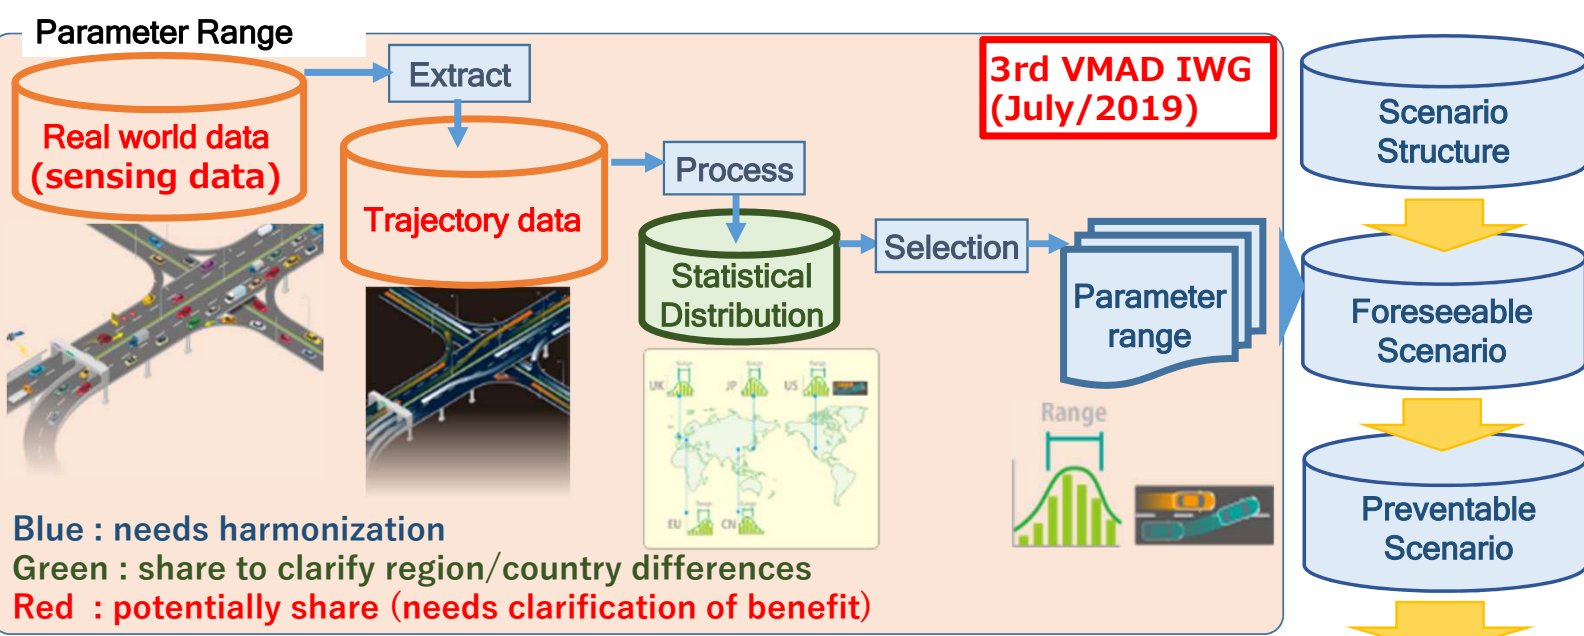

- *Standardized engineering process*
- *Scenario based safety assurance methodology*
- *Scenario database*

DIVP™ Objectives

- *Open Standard Interface*
- *Reference platform with reasonable verification level*
- *Environment & Sensor paired models based approach*

Japan Proposal to ISO and VMAD

2nd VMAD IWG (Jan/2019)

Holistic and finite coverage of safety related test scenario

Scenario Structure

- Perception Disturbance: sensor malfunction
- Traffic Disturbance: traffic jam, lane change
- Vehicle Disturbance: Cause of vehicle instability

Safety Criteria

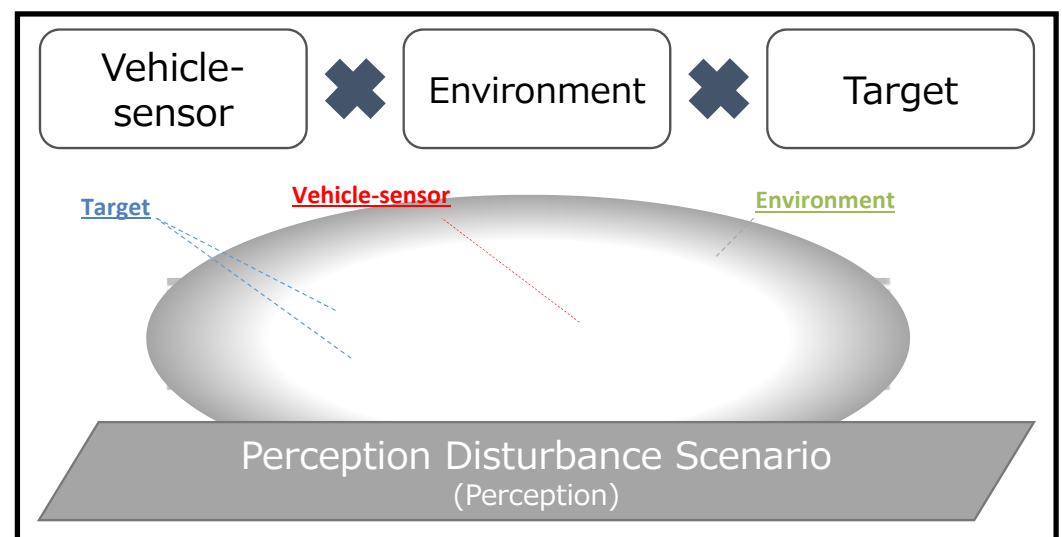

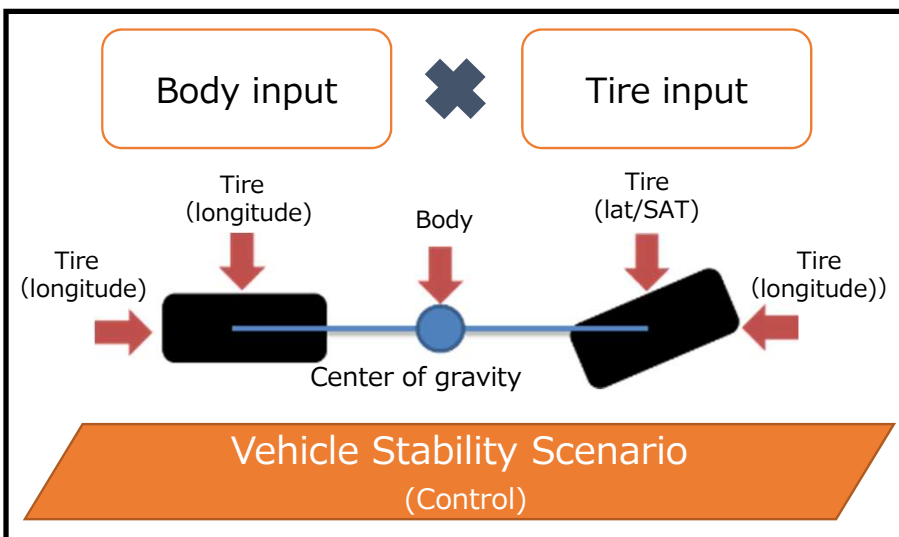

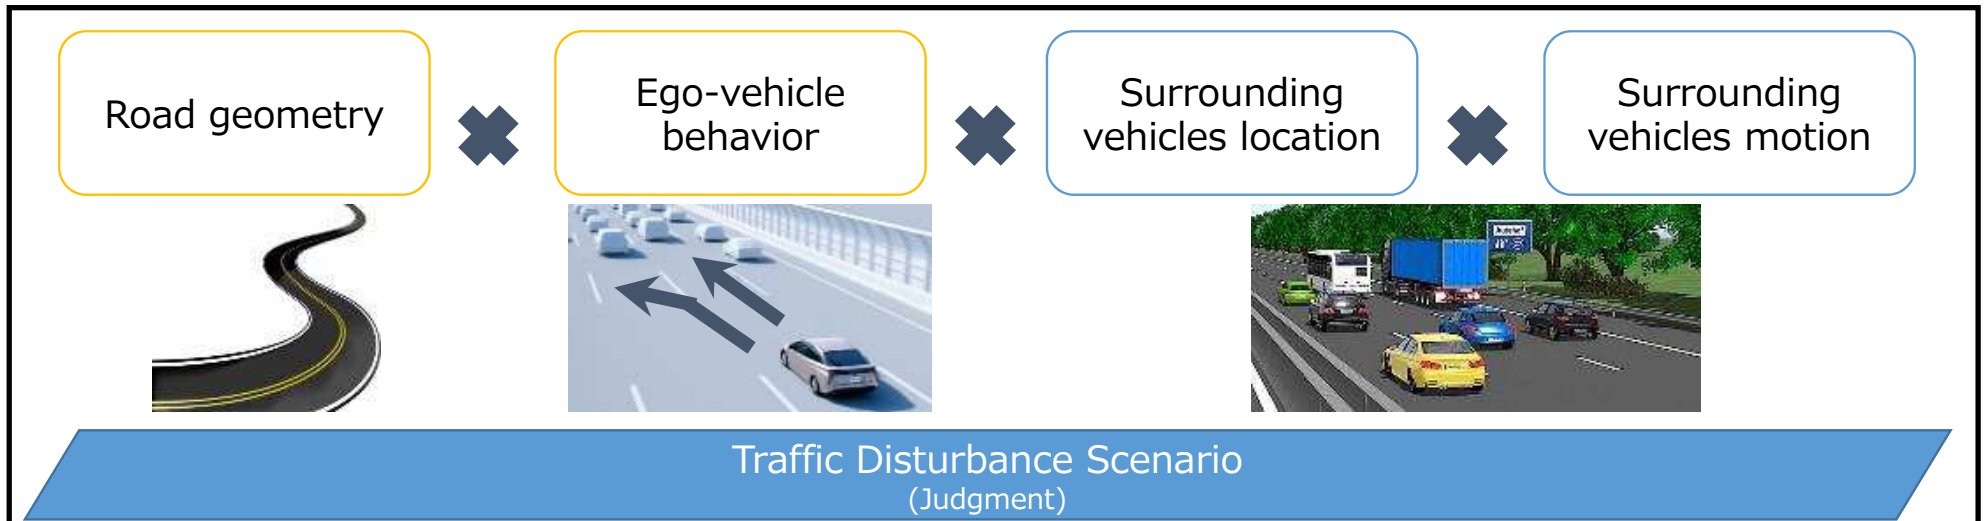

Competent and careful human driver

The diagram shows a sequence of driver actions: 'Risk perceive Situation' (A), 'Delay in time' (B) which includes 'Delay in pressing accelerator pedal' and 'Delay in pressing brake pedal', and 'Deceleration degree and Max. G-force' (C) which includes 'Brake pedal' and 'Accelerator pedal'.

4th VMAD IWG (Sep/2019)

5th VMAD IWG (Jan/2020)

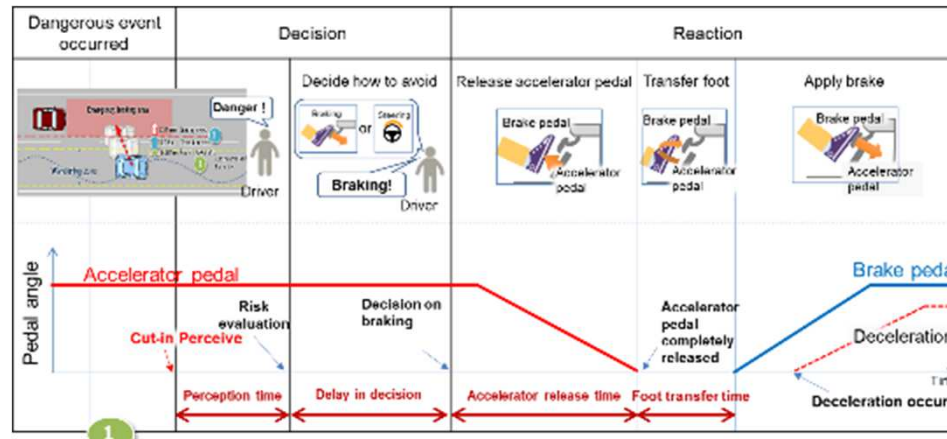

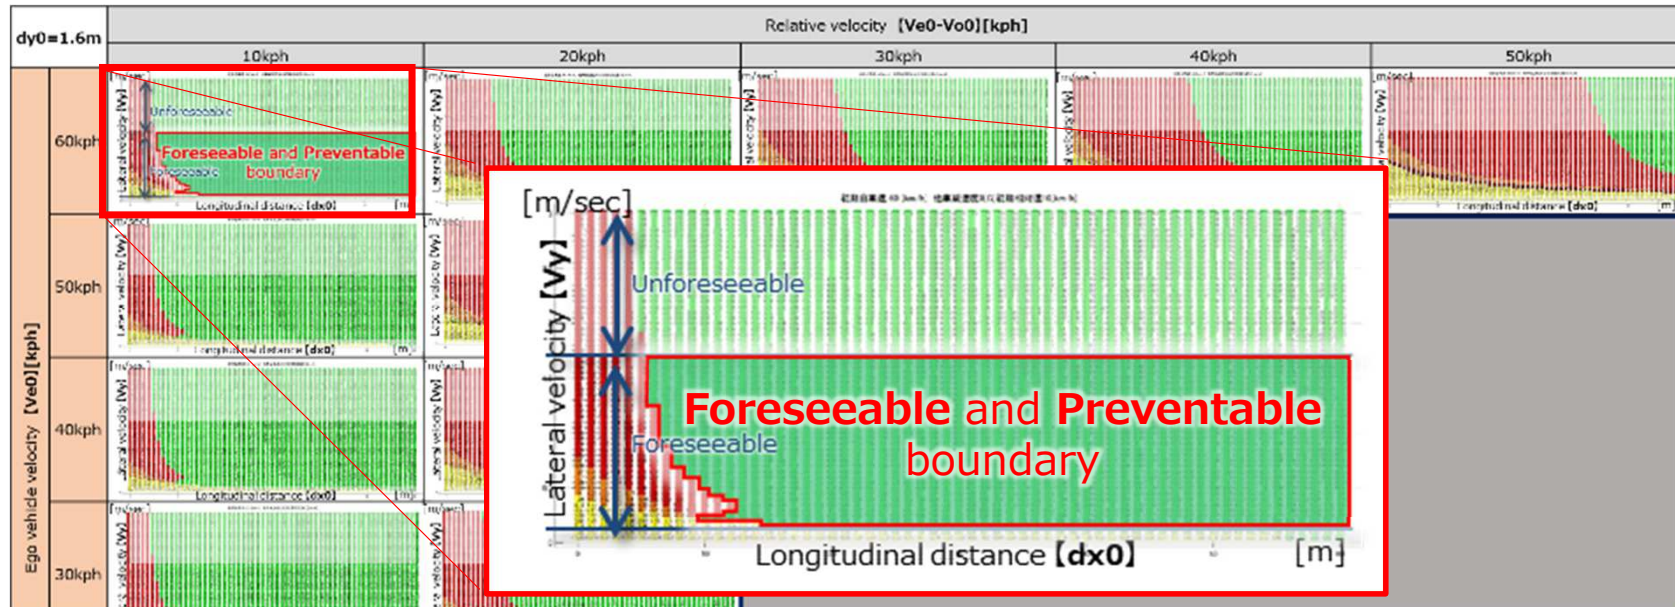

Japan ISO proposal: Scenario Structure

Japan VMAD proposal: ALKS criteria

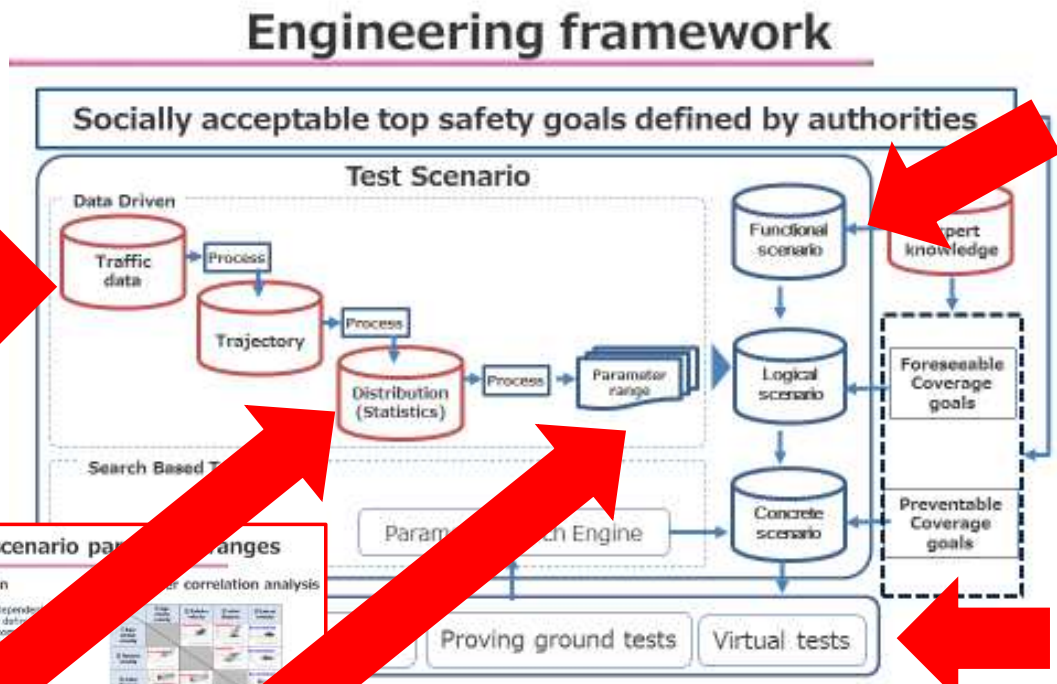

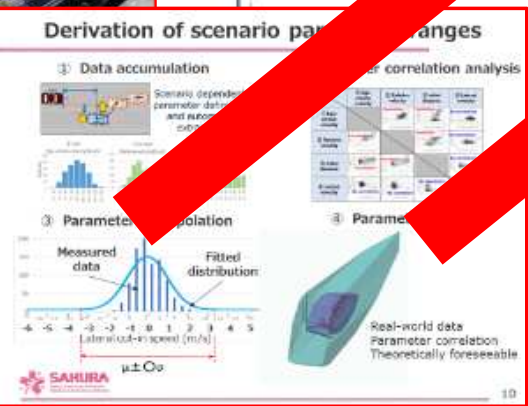

Informal document GRVA-06-02-Rev.4
6th GRVA, 3 – 4 March 2020

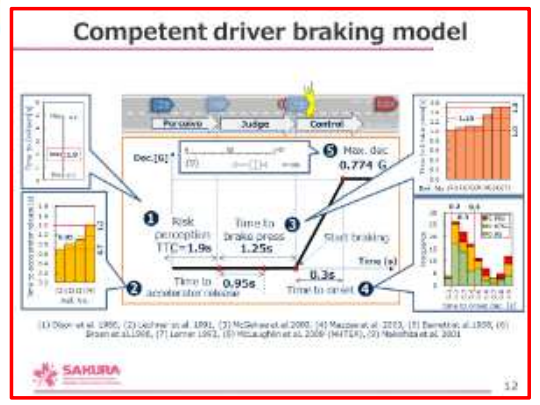

Competent & careful human driver reference model for ALKS emergency situations

SAKURA Engineering framework research

Traffic disturbance scenarios

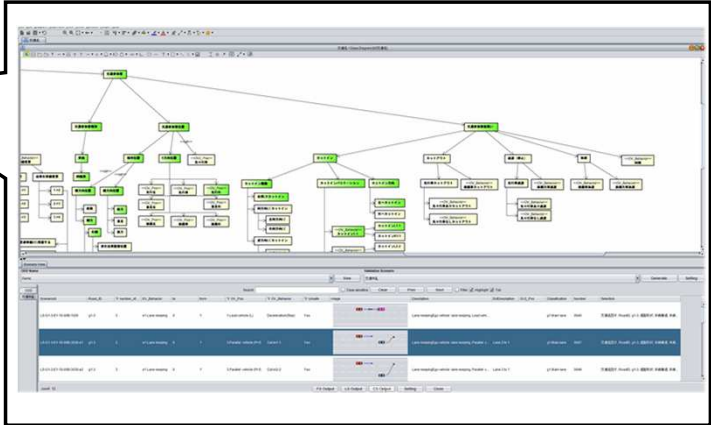

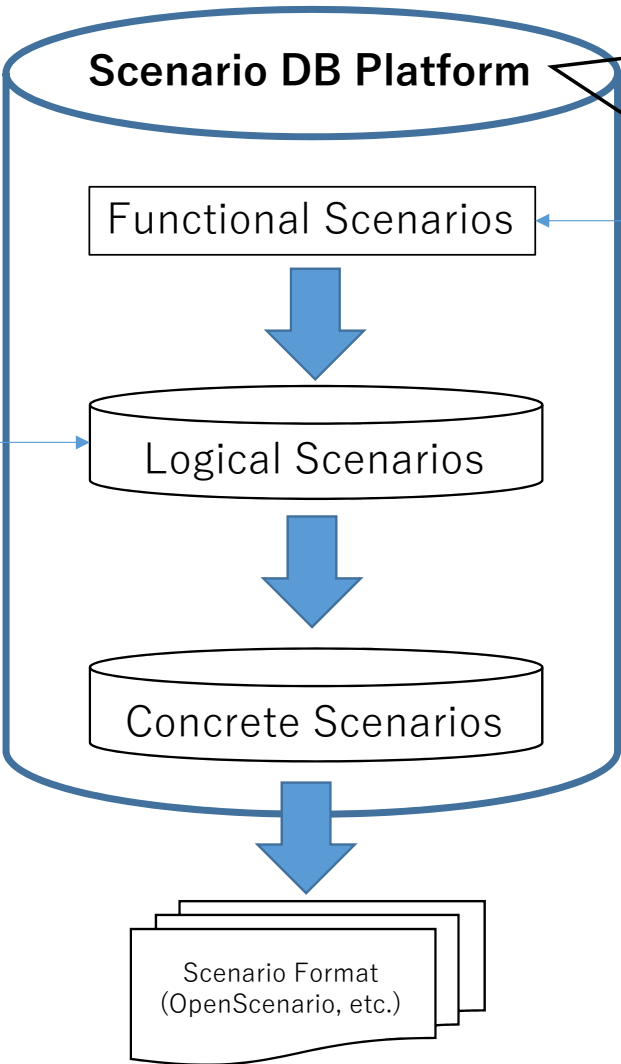

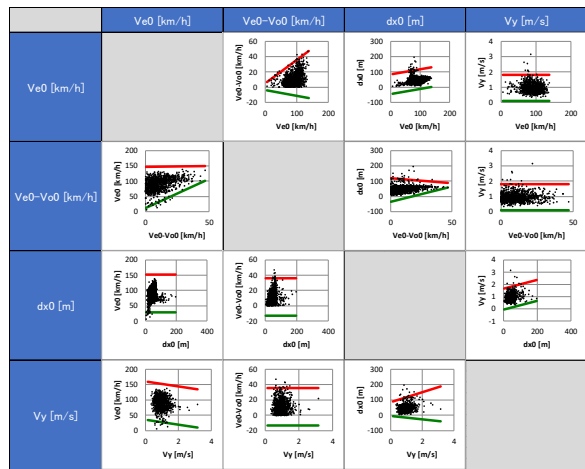

Scenario	Surrounding vehicle position & motion	SAE J2735	SAE J2735	SAE J2735	SAE J2735	SAE J2735
Fast lane change	SAE J2735	SAE J2735	SAE J2735	SAE J2735	SAE J2735	SAE J2735

Highway scenarios

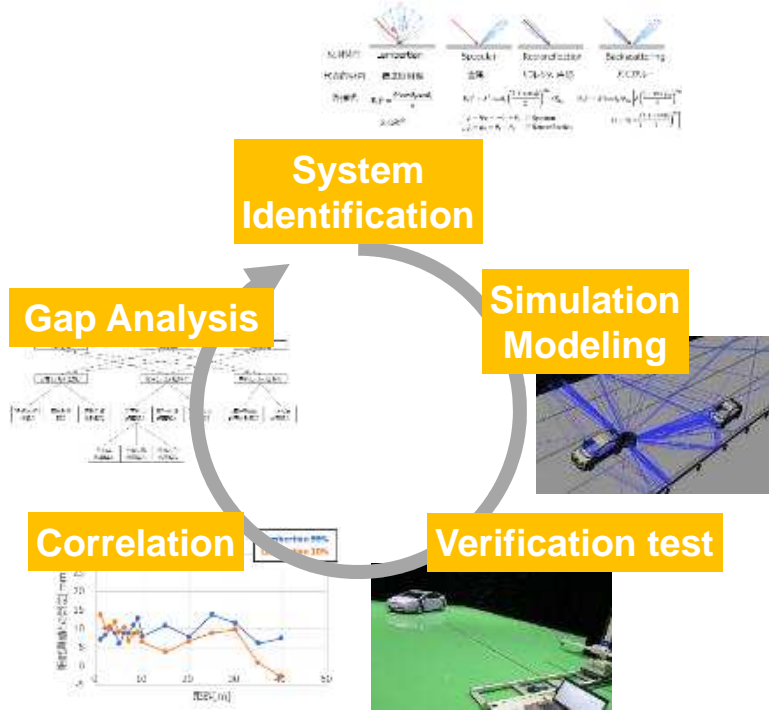

DIVP™ project design

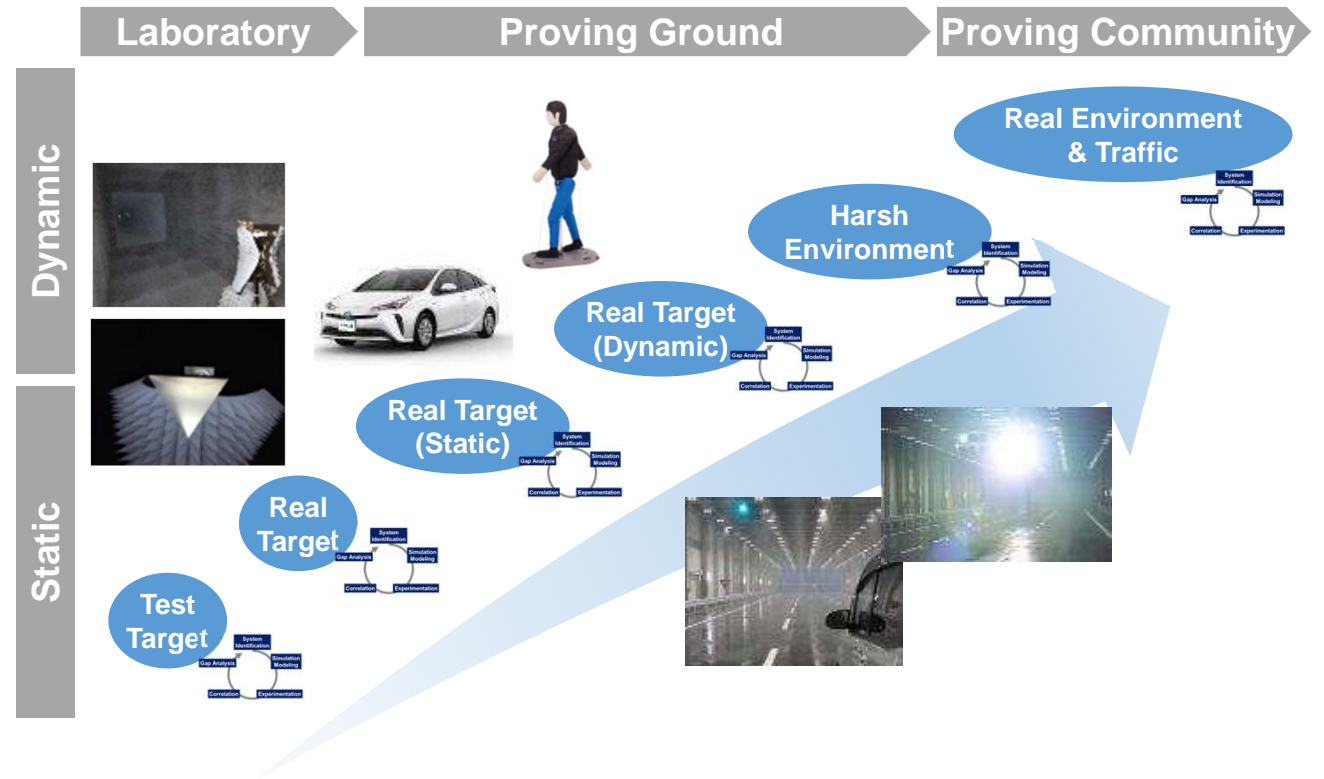

DIVP™ physical model framework

Real physics based approach

Enhancement roadmap

DIVP™ focus on perception challenges

Difficult for Sensor detection

Black jacket

Group moving objects

Card board

Wet surface

Affects for light / millimeter wave propagation

Night

Millimeter wave Multi-path

Rain

Sun light, Backlit

Sensor integration and output precision verification

- 3-sensor output

- LiDAR output

Summary

Safety Principle

Audit Pillar

Safety by Design

Documentation structure in accordance with
 -ISO21447 SOTIF
 -ISO26262 Functional Safety, etc

Testing Pillar

Safety by V&V

Scenario base approach
 - ISO TC22/SC33/WG9

Foreseeable

Avoidance of accident with injury

Best effort functionality to mitigate the severity

Unforeseeable

Learning Process Based on Field Monitoring

Consumer Education and Training

Preventable

Unpreventable

Testing Environment

Real-traffic tests

Proving ground tests

Virtual tests

Willing to collaborate with research, industry, standardization and regulatory institutions, towards joint efforts to ensure a safe automated driving global society

Thank you!
